DEC 20 1960
WEATHER BUREAU

General Summary of Weather Conditions

Most parts of Canada enjoyed seasonable weather during October. Temperatures were below normal over most of the mainland portion of the Northwest Territories and in northern Manitoba, as well as throughout the Maritimes Provinces, but even here departures were small, the greatest amounting to five degrees at Snare River. The remaining parts of Canada enjoyed normal or above normal temperatures, excesses amounting to five degrees in parts of southern Alberta. Precipitation was generally below normal in the southern parts of the Prairie Provinces, southern Ontario and Quebec and in sections of the Maritimes Provinces.

The general circulation over southern Canada did not differ very greatly from normal during October 1960, and as might be expected in this season there were constantly changing regimes during the month. The trough in eastern Canada was a little more intense than usual, and blocking persisted in the Greenland area during the first three weeks.

Intense storm activity in the Gulf of Alaska maintained a circulation of mild air over the Province of British Columbia, resulting in mean temperatures for the month one to three degrees above normal throughout the province, except in the far northern districts where there were occasional deficiencies of one or two degrees.

Precipitation was heavy along the Pacific coast with many stations receiving in excess of twenty inches during the month. The heaviest fall was 34.03 inches reported from Herbert Inlet on the west side of Vancouver Island. Ocean Falls also reported over thirty inches. Generally there were excesses ranging to sixty per cent along the coast and the central and northern interior of the province. There were excesses ranging to fifty per cent on the Fraser Delta but the southern interior valleys reported an average deficiency of thirty to sixty per cent.

Storm centers in the Gulf of Alaska maintained a flow of mild air across the southern parts of the Prairie Provinces. The warmest days were October 6 and 7 when new record highs for the day were established at Medicine Hat, Prince Albert and Saskatoon, among others. There were cold outbreaks on the 9, 17, and 29. On the 19th a new record low minimum of 2.9 was established at Moose Jaw, while on October 9th a freezing temperature at Edmonton ended a frost free period of 155 days which was the longest on record since 1881. Mean temperatures for the month were four or five degrees above normal in the Lethbridge - Red Deer area, two to four degrees above normal in the remaining parts of southern Alberta and southern Saskatchewan and one or two degrees above normal elsewhere in Alberta and southern Saskatchewan. In northern Manitoba on the other hand Brochet experienced a deficiency of four degrees while Churchill had one of three degrees. The highest temperature in Canada during the month was 86, reported from Vauxhall.

With the exception of the districts immediately surrounding Edmonton and Winnipeg, the prairie grain areas were dry during the month of October, particularly in southern Saskatchewan where, for another month, many stations reported no precipitation. In southern Alberta there were generally deficiencies of ten to ninety per cent except for the excesses already noted in the Edmonton region, where a few stations reported twice the normal fall. In southern Manitoba there was a thirty per cent excess at Winnipeg but most other stations reported deficiencies ranging from ten per cent on the eastern side of the province to sixty per cent on the western side. Precipitation was irregularly distributed in the Peace River district, with the average about thirty per cent below normal. In northern Manitoba on the other hand there were generally excesses averaging about fifty per cent.

The general weather pattern in October was highlighted by the passage of many vigorous low pressure areas across the northern regions of Ontario, with strong flows of Arctic air influencing the province in the wake of these storms. During the early part of the month the weather was very warm with many stations recording temperatures in the seventies in northern Ontario during the first ten days of the month. As a result mean temperatures for the month were normal to two degrees above normal in northern Ontario and within one degree on either side of normal in the southern counties.

Snowfall was heavy in northern Ontario during the 3rd week of the month, Nakina reporting 8 inches on the night of the 18th and Kapuskasing 9.4 inches on the 23rd. For the month as a whole precipitation ranged to thirty per cent above normal in the district of Patricia, but elsewhere in northern Ontario excesses and deficiencies were almost equally frequent and ranged to about fifty per cent. The southwestern counties of southern Ontario were dry, deficiencies ranging from twenty to fifty per cent, while in the remaining portions of southern Ontario the range was from excesses of ten per cent to deficiencies of twenty or thirty per cent. In the Province of Quebec the three northern most stations reported temperatures two degrees above normal for the month - they were Fort Chimo, Port Harrison and Nottingham Island. Elsewhere in the province temperatures were within one degree of normal.

Stations in the Montreal area experienced excesses of October precipitation of thirty to sixty per cent but almost all other stations in the southern portion of Quebec experienced below normal precipitation during the month. Deficiencies were small ranging to about ten per cent in the Eastern Townships and the districts north of the St. Lawrence River. On the Gaspe Peninsula, and in the Lake St. John area there were deficiencies averaging about fifty per cent. In the central and northern parts of the province precipitation was very irregularly distributed, the range being from a seventy per cent deficiency at Port Harrison, to a thirty-five per cent excess at Nitchequon.

More storms affected the Maritime Provinces in October than in the preceding month, but the activity was still less than normal for the season. There were precipitation excesses in the southern half of New Brunswick notably at St. Andrews, where more than twice the usual fall was experienced. On the other hand the greatest precipitation for the month was 7.57 inches recorded at Margaree Forks on Cape Breton Island. In the northern half of New Brunswick there were deficiencies of about twenty per cent. Prince Edward Island and Nova Scotia again experienced a dry month, with deficiencies ranging to forty per cent on the Island and sixty per cent along the Atlantic coast of Nova Scotia. At Halifax October was the seventh consecutive month with sub-normal precipitation and above normal sunshine. Many suburban and rural areas in the Maritime Provinces were still suffering from water shortages at the end of the month.

October mean temperatures were near normal along the Nova Scotia side of the Bay of Fundy and in the northern section of New Brunswick. Elsewhere in the Maritime Provinces there were deficiencies of two to four degrees.

October weather was mostly seasonable and pleasant on the Island of Newfoundland. On the 18th of the month a major disturbance moved from near Sable Island across Newfoundland bringing gale force winds and heavy rains. This was the only major disturbance to visit the island during October, and indeed brought the first heavy rainfall for several months. All stations on the island reported above normal rainfall, the greatest excess being seventy-eight per cent at Buchans. October mean temperatures were within one degree of normal at all stations on the island with the exception of Daniels Harbour, where there was an excess of five degrees, and Grand Falls one of three degrees.

October was mild along the Labrador Coast, with excesses of mean temperature ranging to four degrees, averaging two degrees. Precipitation was heavier than usual, Cape Harrison reporting three times the normal amount, while at other stations there were excesses ranging to thirty per cent.

In the Yukon Territory cyclonic activity farther west brought in cold air, resulting in mean temperatures for the month generally about two degrees below normal. In the southern half of the Yukon there were precipitation excesses of about seventy per cent while farther north Dawson reported a deficiency of forty per cent.

In the districts of Mackenzie and Keewatin October mean temperatures were also below normal, the greatest deficiency being five degrees at Snare River and four degrees at Port Radium. On the islands of the Arctic Archipelago almost all stations reported temperature excesses, the greatest being eight degrees at Eureka, while the remainder of Baffin and Ellesmere Islands experienced temperatures generally about five degrees above normal. On the western islands the range was from normal to two degrees above normal. Mould Bay was exceptional with a deficiency of three degrees.

Precipitation was above normal throughout most of the Northwest Territories. Greatest excesses were reported from Baker Lake which had over four times the normal fall while Snare River had twice the normal and Fort Simpson three times. Elsewhere on the mainland portion of the Northwest Territories excesses were more moderate, ranging to about seventy-five per cent. On the islands of the Arctic Archipelago, Holman Island had over twice the normal fall. Most other stations had excesses ranging to eighty per cent. Clyde River was exceptional with a deficiency of fifty per cent, while Southampton Island reported a deficiency of thirty per cent.

SEPTEMBER 1960

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.

MIN. The lowest temperature.

MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.

SUN The total hours of bright sunshine for the month.

SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
